BUREAU OF CITY PROPERTY, CITY HALL, PHILA.

Many thousands of people who for years have enjoyed the gorgeous display made in the Philadelphia City Parks and Squares were more than ever certain that this year the display would be more beautiful; and it was. Out of over 125,000 bulbs planted, the fullest satisfaction was realized. Your house seems to maintain the high standard of supplying only the best, the bulbs being always true to name and type, and of magnificent size. It pleases me greatly to know the public will have their Annual Spring Flower Show next season, since the Department of Supplies has again awarded you the order.

JOHN C. LEWIS,
City Forester and Landscape Gardener

Are annually planted in the public squares and parks of Philadelphia, Harrisburg, Reading, Wilkes-Barre, and in the Executive Mansion grounds and green houses at Washington, D. Brief Cultural Directions on a few of the Most Important Bulbs

HYACINTHS

Directions for Planting in the Open Ground.—This should be done in October and November, but they can be set out at any time, as long as the ground is open and the bulbs remain sound, but early planting always insures good root development and thorough establishment. The best compost for their culture is the following: One-third sand, one-third well rotted cow manure and one-third good garden mould; or, where the soil is naturally light, well rotted cow manure liberally intermixed is sufficient. Special care should be taken not to add any bone fertilizers, as they usually draw vermin. The beds composed of the above compost should be well dug to a depth of fourteen inches, and raised from two to four inches above the level of the walks. Care must be taken not to press the earth too firmly around and over the bulbs. After planting, rake the bed smooth, and after the ground has frozen tolerably hard in early winter cover with dry litter, leaves or coarse manure. If this be applied before freezing weather it renders the bulbs liable to the predations of field mice.

For Culture in Pots.—Prepare the above compost, adding, if possible, a quantity of leaf mould. The most favorable time for planting is September, October and November. The size of the pot depends on the number of bulbs planted in a single one; three bulbs in a pot of, say, six inches diameter make a rich, massive effect; one or two bulbs in each may be planted in proportionately smaller pots—two bulbs in each are very effective. When planted water them well, then bury the pots in the open ground to the depth of six inches for eight weeks, in which condition the preparatory root growth necessary to a vigorous development of their flower spikes is made. After this period take up the pots and remove them to a room not heated, but not so cold as to freeze. Being exposed to the light for the first time, they are, of course, very delicate. Care should, therefore, be exercised not to place them in the direct rays of the sun for two or three days.

For Growing in Glasses.—Single varieties are the best for this purpose, as they produce much more satisfactory blooms than the double ones. Place the bulb in the glass, which should be filled with water so it touches the bottom of the bulb, place them in a cool place, in the dark,

changing the water every ten days or two weeks; keep them in the dark from six to eight weeks, then remove them to the light. If then kept in a cool room they will produce very fine spikes.

A small piece of lump charcoal placed in the water will prevent it from getting foul.

TULIPS

For Bedding Out.—The bed should be formed of a compost similar to that recommended for Hyacinths; the bulbs should be planted about four inches apart and about five inches deep (close planting makes a much finer effect and prevents the flowers breaking off when swaying in the wind); they should then be covered with a litter shortly before the severe freezing weather sets in, and left in this condition until spring approaches.

For Pot or Pan Culture.—Plant about four bulbs in a six-inch pot or five bulbs in a six-inch pan, water thoroughly and then remove to the open ground or in a cold frame, covering with coal ashes; after they have rooted thoroughly they should be brought into a moderately cool room and gradually warmer; by bringing in a fresh supply from the outside every ten days, they can be had in bloom continually.

NARCISSUS

The double and single trumpet varieties should be planted in soil. For indoor culture, plant in boxes or pots, and treat similar to Hyacinths. Chinese Lilies and Paper White Narcissus, and the Polyanthus types, such as Grand Soleil d'Or, etc., succeed very well and are quite interesting if planted in water and pebbles, as one can watch their progress of growth. A small lump of charcoal prevents the water from getting foul, although changes of water are advisable.

CROCUS

A real show can be obtained from these tiny bulbs. They will bloom in a few weeks from time of planting inside. Place a few bulbs, or as many as the size of crock will warrant. In a short space of time the bulb will make a grand display. Planted out in the open ground, they bloom among the first of the spring flowers.

GERMANTOWN, PHILA., PA.

The 25,000 bulbs I purchased from your firm last year were superior to those which I myself imported and grew under the same conditions, especially the **Dutch Hyacinths**. These I grew on contract. They were so satisfactory to my trade that I have already booked orders for next Easter. Kindly put down my order again for this year and increase it 50 per cent.

MICHELL'S CHOICE BEDDING HYACINTHS

Unnamed Sorts

In the following hyacinths we offer something very choice either for bedding or for pot culture. Where bedding of hyacinths is to be done in large quantity we can particularly recommend them on account of their low cost, the length of time they remain in flower, and because of their handsome effect.

FRENCH ROMAN HYACINTHS

Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if forced successively. They are very fragrant. The blooms are suitable for most any kind of cut-flower work ; they also look very attractive if planted in boxes or pots and used for window decoration. They are not hardy, consequently will not do for outdoor planting.

MICHELL'S COMBINATION BULB BEDS

This year we have arranged these beds in bulbs of various kinds as well as combinations. Our calculations are based on 6 and 8 ft. diameter with tulips planted 4 inches, hyacinths 6 inches and Narcissus 4 inches apart. If you have different diameters, see page 2, on which we have arranged a planting table for different sizes and distances. These beds will be a source of great delight and satisfaction and we recommend them as an economical way of making a grand flower display next spring.

MICHELL'S HYACINTH BEDS

Hyacinths are very desirable for bedding, being somewhat earlier than tulips and making a finer and more lasting show. The fragrance they impart to the air is indescribable.

Named Hyacinths, 6 ft. beds requiring 125 Bulbs. Centre 30 White, next two rows around centre 30 Blue, outside circles 65 Pink. **Price** for Named Hyacinths for this bed, No. 13, \$5.75

8 ft. diam requiring 215 Bulbs. Centre 50 White, next two rows around centre 50 Blue, outside circles 115 Pink. **Price** for Named Hyacinths for this bed, No. 14, \$9.75.

Unnamed Hyacinths. These make a fine show at less expense. The only difference being in the spikes of flowers which are not so large. **Price** for 6 ft. bed combined as opposite, Bed No. 15, \$3.45. **Price** for 8 ft. bed, No. 16, \$5.90.

MICHELL'S DAFFODIL

Daffodils are rapidly coming into great favor. They cover a long period of flowering season, many are delightfully scented and the show made rivals most anything in the flowering bulb line. For the most part it will be found that where no one special kind of Narcissus is wanted, it is but to plant a bed of assorted named kinds, which will supply bloom for four weeks or more and we recommend combinations as follows, which should be thoroughly mixed together before planting so the bed will be a continual mass of bloom.

OR NARCISSUS BEDS

No. 17. 6 ft. diam. bed requiring 240 Bulbs.

20 each—**Poeticus Ornatus**, **Burbidgei**, **Biflorus**, **Leedsii**, **Stella**, **Barri Conspicua**, **Cynosure**, **Trumpet Major**, **Ard Righ**, **Emperor**, **Empress**, **Campernell Rugulosus**. **Price** \$3.75.

No. 18. 6 ft. diam. bed requiring 250 Bulbs.

50 each—**Von Sion**, **Incomparable Double**, **Orange Phoenix**, **Alba Plena Odorata**, **Sulphur Phoenix**. **Price**, \$3.75.

If 8 ft. diam. beds of same combination of Narcissus are required they will cost \$7.50 for either the No. 17 or No. 18 or as the number of bulbs figured on is just double.

MICHELL'S EARLY DOUBLE TULIPS

Double Tulips are used very extensively for forcing but are equally valuable for bedding purposes. They remain in flower longer than do the single sorts on account of their substance, although they do not make quite as fine a show. They should not be planted in beds with single tulips as they do not bloom as early as the single sorts. The number prefixed before the variety denotes the approximate height.

MICHELL'S LATE OR MAY FLOWERING TULIPS.

Nothing in the line of horticulture has received so much comment in late years as the late flowering tulips. A few years ago where only hundreds were sold, the demand has now grown to hundreds of thousands. They well deserve the popularity they have gained, for no other of the spring flowering bulbs can approach them for brilliancy, beauty and usefulness. Reading from the left, the above shown sorts are Bizarres, Bouton d'Or, Golden Crown and Bybloemen. The numbers indicate the approximate height. They are all adapted for cutting but not for forcing.

SEPARATE COLOR NAMED SORTS

PARROT OR DRAGON TULIPS

These belong to the late flowering class and on account of their peculiar markings and shadings, are much in demand. They are curiously curled and crested, as may be seen by observing the illustration below. They are fine for bedding and border planting, also useful as a cut flower, keeping well for some time when placed in water. They are very fragrant, and grow about 12 in. high. We offer first size bulbs only in Parrot Tulips, in second size rarely bloom the first year.

The bulbs I had from you last year gave me the best flowers I've had since I've been in business, and that is saying a good deal. They were the best in all Lebanon and I was sold entirely out of Easter bulb plants two days before Easter. Here is my order for next year.

MICHELL'S DOUBLE NARCISSUS OR DAFFODILS

The Narcissus or Daffodil is becoming more popular every year. It is hardy in every way and thrives most anywhere. For naturalizing in woods and fields, nothing equals it. When once established they multiply rapidly and in a short time cover tremendous areas. They can also be used for forcing, for which purpose they are highly desirable. Plant in a pan or pot anywhere from 3 to 12 bulbs, according to size of bulb. After they have been forced and flowered they can be planted out doors for another year's bloom. We offer large bulbs only.

Alba Plena Odorata. A very sweet-scented pure white variety called Double Poets Narcissus; it flowers later than many of the other daffodils, and is not desirable for forcing. It makes a handsome show bedded among perennial plants and shrubbery; height about 15 inches. 3c. each; per doz., 20c.; \$1.00 per 100; \$9.00 per 1000.

Incomparable Double. On account of the peculiar suffusion of the colors in the flower, this variety is also known as "Butter and Eggs." The color is yellow and orange and makes an attractive cut bloom. Its greatest value is for outdoor planting as it does not force so well. Height about 16 in. 3c. each; per doz., 25c.; \$1.50 per 100; per 1000, \$12.00.

Orange Phoenix. A variety similar to the above, except for coloring, which is a light yellow, almost white, with a yellow centre. It is splendid for forcing or pot culture. It is also called "Eggs and Bacon." Height, 16 in. 4c. each; per doz., 30c.; \$1.75 per 100; per 1000, \$14.50.

Sulphur (or Silver) Phoenix. Flowers very large, bluish-white; the centre is sulphur colored; excellent for forcing or outdoor planting. Height, about 18 in. 5c. each; per doz., 50c.; \$3.00 per 100; per 1000, \$25.00.

Michell's Double Narcissus. Monster Von Sion.

Von Sion. (*Telimonius Plenus*.) The true double daffodil. Our stock of these comes from one of the largest daffodil producers in Holland. The color is a pure golden yellow entirely free from green tipped flowers, which are often found in cheap grades. For forcing or outdoor planting it has no equal. It should be planted extensively for naturalizing. Height, about 15 in. Well matured stock.

POLYANTHUS NARCISSUS

This class of Narcissus is a most interesting one. They may be grown in water and pebbles like Chinese lilies, but they are equally suited for growing in soil. The flowers are produced in clusters, like the illustration, and they are delightfully fragrant. They are not as a general thing hardy, but can be planted outdoors only if afforded liberal protection during winter.

Our Easter Lily bulbs are known far and wide as the best to be had anywhere at any price. Each year our sales increase in great proportions. All Lily bulbs are fully matured, healthy and up to size, in fact we aim to give the largest possible value for the money.

**EASTER SUNDAY IN 1911
COMES ON APRIL 16th**

LILIUM HARRISII

The old favorite Easter Lily; too well-known to need description, except to say that in our "Special Brand" strain we offer something decidedly superior. *Lilium Harrisii* may be planted outdoors if afforded protection during the winter.

Cultural Note on Harrisii—In order to obtain best results from *Lilium Harrisii* attention to the following brief directions will assist materially: Upon receiving the bulbs, pot them immediately. Place a handful of well-rotted cow manure in the bottom of the pot and place the bulb directly on top, covering it with soil. After watering, place pot in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes or any other suitable litter. When the bulbs have become thoroughly rooted, bring inside, in a temperature of about 60°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. *Thorough rooting is the most essential point.*

JAPANESE EASTER LILY BULBS**Ready in October****How to Grow them for Best Results**

These require to be handled somewhat differently than do Harrisii Lilies, and observance of the following directions which are quoted by a practical grower might assist in success:

Upon arrival of bulbs pot same at once in 4-inch pots, using coarse soft-coal ashes for drainage in the bottom of pots, giving them a soil composed of sandy loam and well enriched with about $\frac{1}{3}$ well rotted horse or cow manure.

Place pots under a dry bench in either a violet or carnation house, soak down with water very heavy, and after two or three days cover the pots with 2 or 3 inches of ashes.

When Easter is early, place lilies on bench after January 1st, giving them a temperature of 60° night and 70° day for about 10 days, then 70° night and 80° day until buds can all be counted.

During this period manure-water them regularly once a week with the following liquid: 1 bushel cow manure (fresh), and one 4-in. pot full of nitrate of soda to each 50 gallons of water.

Spray the foliage once a day (twice a day when clear weather), and keep the house moist otherwise by spraying the walls and walks. It is also very important to never allow the soil to get very dry, and never feed unless the soil is moist.

When the buds can be counted easily, move plants into houses where you can get the temperature down gradually, and finally mulch them with either a little sheep manure or bone-flour.

CALLA LILY BULBS

Callas require good, rich soil and plenty of warmth and water to make them thrive. The White Calla may also be grown in water. The black variety does not require so much moisture. TESTIMONIAL

I have been buying all my bulbs from another firm in years gone by, but last season I purchased some of the same sorts of bulbs from them and part from your house. Yours proved to be most satisfactory in every way while those from the other firm turned out in many cases to be blind.—MRS. MARY CRISWELL, Vandergrift, Pa.

CHINESE SACRED LILY

These beautiful flowers are deliciously fragrant and are produced in great abundance. The best effect may be had by planting three or more bulbs in a cluster. This is usually done in bowls, with pebbles and water, although they may also be grown in soil. After planting, place the bulbs in a dark, cool place until the bud appears in the stem; then bring to the light. Care should be taken at all times to see that they have an abundance of water. Many failures of Chinese Lilies to bloom are caused by keeping them in too warm a room; also by gases and dry heat. It is best to keep them in a cool room until the buds have burst. They flower in six weeks from time of planting. Color white, suffused yellow. We handle only blooming size bulbs.

The bulb produces a stem 3 to 4 feet long with a cluster of bell-shaped flowers at the top, which are gorgeous in coloring. We offer mammoth bulbs.

CROCUS

Nothing can be had for so small an outlay that will produce the effect of a planting of Crocus bulbs. They should be put in the lawn, in the woods and wherever a place is available. The bright colored flowers appear almost as soon as the snow is away and makes one feel as though spring were actually at hand. For edging around perennial borders they are grand. They should be put in double or triple rows. We recommend for fine effect, planting the Giant Named varieties.

DIELYTRA SPECTABILIS (Bleeding Heart)

Ready in November. A very ornamental spring-flowering plant. The flowers, which are heart-shaped, are produced on long drooping stems, of a beautiful rose and white color combination. It is the earliest spring plant to flower, with the exception of some bulbs. After the flower has bloomed away, the plant makes a very attractive appearance with its foliage. In order to make strong root development, the top may be cut away to the ground after the foliage has thoroughly developed. *Dielytra* forces very readily and is very attractive in a greenhouse or conservatory. We offer very strong, large roots. 15c. each (by mail, 20c.); per doz., \$1.50; \$10.00 per 100; per 1000, \$90.00.

GLADIOLUS (Ready in November).

The three varieties we offer below are very well suited to greenhouse culture, where they may be planted on carnation benches and in almost any place where they will get light and water. They produce long spikes of beautiful flowers, and are fine for cutting.

A beautiful white flower of exquisite fragrance. A continuance of them in flower can be had from Christmas until early summer, if planted at intervals of two or three weeks. Put them in pots or pans, 6 or 8 bulbs at a time, and place them in the light. Unlike most other bulbs, they make root and top growth at one time and become weakened if put in the dark. The flower stem is 8 to 10 inches long, and therefore it makes valuable for cutting.

GRASS SEED MIXTURES

There is nothing more essential to the well appearance of any place (whether it be a small city residence or a spacious country estate) than a well-established and kept lawn. Michell's Grass Seed Mixtures for lawns, pleasure grounds and fields are proven annually by thousands to be the very best obtainable. Last year our grass seed sales exceeded 250,000 pounds. This year they will be much larger. It might be well to compare our prices with those of other houses, who claim to give quality and at the same time charge top-notch prices. In many instances our prices are 25 per cent. less, and in no case is quality sacrificed.

PRAIRIE STATE INCUBATORS

The Incubator offered here is to-day the most successful, the largest seller, and surest hatcher of any. Its reputation has not been built up quickly like some who have since retired into the field of unusefulness. The Prairie State user is always sure of his money's worth and that he will not have a lot of annoying worry attend the incubation of eggs. The Prairie State is as faultless as it is possible to make incubators. This is attested by our increasing large sales, and that we never have one returned as unsatisfactory. They all make good.

AUTOMATIC FEEDERS

In operating the Norwich Automatic Exercisor and Feeder, it is but necessary to fill the Hopper with such grain feed as may be desired, straight or mixed, filling the Feed Bar with either cracked corn or wheat, and adjust the valve at the bottom of the Hopper to feed in such quantities as desired. Set the machine anywhere in the yard, pen or house, give the Feed Bar a turn or two, and surprising as it may seem, in ten to fifteen minutes every hen in the flock will take in the situation and work it.

Another valuable feature is the fact that the Hopper being rain-proof, the feed is always dry and fresh. No matter how hard it rains not a drop of moisture can enter it. The Feed Bar, being under the Deflector, is protected from rain as if under an umbrella, and in consequence the feed in it is always dry and inviting. The Hopper being water-tight, is also dust-proof, so that if stood in the house, not a particle of dust can get on the feed and therefore nothing but clean grain is delivered.

Bulbs for Naturalizing

A charming effect
Narcissus Poeticus Ornatus
planted on the banks of a stream

MICHELL

**Suited for Planting
in Meadows,
Fields, Woods,
etc.**

The naturalizing of bulbs is now growing in favor just so much as the promiscuous sowing of flower seed and setting of plants for wild garden effect.

Daffodils or Narcissus, Grape Hyacinths, Chionodoxa, Scilla, Ornithogalum,

and others, when once planted remain for years, and the clumps increase in size and vigor.

Under this heading are those suited to various conditions, and the price is within the reach of every one. It is advisable to add each year to plantings already established, so as to increase the collection and to replace any that may have naturally died out by reason of long establishment. We can also suggest and supply other bulbs, roots, or plants for this purpose.
